About the editors

Professor William J Nuttall

Professor of Energy at the School of Engineering and Innovation, The Open University, Milton Keynes, UK.

Dr David V Gibson

Senior Research Scientist Emeritus at the IC² Institute, The University of Texas at Austin, USA.

Professor Dariusz Trzmielak

Associate Professor, Department of Marketing, University of Łódź, Poland

Professor Alejandro Ibarra-Yunez

Professor of Economics and Public Policy at the Graduate School of Business and Leadership (EGADE), Tecnológico de Monterrey, Mexico.

About the contributors

Dr Peter Boait, PhD, BSc is a Visiting Research Fellow at the Institute of Energy and Sustainable Development at De Montfort University, and also chair of Gloucestershire Community Energy Co-Operative. His research interests are in smart control of domestic energy systems and their system integration for efficient operation at community and national scale.

Professor Richard Bull, PhD, MA, BA (Hons) is Deputy Dean of the School of Architecture, Design and the Built Environment at Nottingham Trent University, UK and Professor of Energy and Behaviour Change. Professor Bull has been a Principal Investigator and Co-investigator on a range of UK and EU research projects exploring innovative participatory methods of engagement surrounding energy use in non-domestic buildings and organisations.

Dr Sally Caird, PhD, MEd, BA(Hons), FHEA has worked in research and teaching roles at The Open University, UK since 1991. She is a Senior Lecturer in Technological Innovation Management and has extensive research experience in examining innovation processes associated with the design, use and impact of low carbon products, services and systems in the built environment.

Professor Matthew Cook, PhD, MSc, FRGS has been employed in urban planning practice and academia for over thirty years. His research interests are in urban innovation and he has been Principal Investigator on several projects concerned with the development of smart cities, urban transport and energy systems. He has also established and now leads the Future Urban Environments research group at the Open University.

Dr Ken Dooley, PhD, BE (Hons) is a Technology Director at Granlund. He has over 15 years' experience as a consultant in the built environment and has worked in London, Sydney, Dublin and Helsinki. He is also a Postdoctoral Researcher in Department of Electrical Engineering and Automation at Aalto University, Finland.

Tahrir Jaber, MSc, is a doctoral candidate in the School of Business and Economics at The Arctic University of Norway – UiT. Her recent education background is in Business Creation and Entrepreneurship. Her current research interests focus on the sustainable business movement and more specifically on how companies/ individuals constitute their sustainable concerns and successfully launch sustainable projects.

Dr Remigiusz Kozlowski, PhD Eng, MA, at first worked in technology companies and then in universities. He is engaged in solving the problems of transport logistics in cities using intelligent transportation systems, emerging from over twenty years of work on the subject of the application of modern technologies.

Dr Muhammad Mazhar, PhD, MSc, BE is a Senior Lecturer in Sustainability in Nottingham Business School at Nottingham Trent University, UK. His research interest is in energy/carbon management, low carbon smart cities and citizen engagement.

Elin M. Oftedal, PhD, MSc, BBA is an associate professor in the School of Business and Economics at The Arctic University of Norway – UiT. She received her PhD in Management, with focus on entrepreneurship and innovation. Her research interests include entrepreneurial universities, student entrepreneurship, and sustainable and responsible innovation. She has developed several research applications for different agencies and is currently co-managing an international research project on responsible innovation across six countries funded by Norwegian Research Council.

Dr Stuart Parris, PhD, MSc, BSc (Hons), is Senior Lecturer in the Faculty of Arts and Social Sciences at The Open University. He has researched innovation processes and entrepreneurship at the regional and firm level for over a decade, as well as conducting related consultancy projects for public and private sector organisations.

Professor Stephen Potter, PhD, BSc is Emeritus Professor of Transport at the Open University. His research has explored the human and institutional aspects of transport innovation, the diffusion of cleaner vehicle technologies, low carbon transport systems and more sustainable travel behaviours. Research projects on transport for smart cities have included the Milton Keynes ‘Plugged in Places’ programme and ‘MK:Smart’.

Dr. Richard Snape, MEng MA(Cantab) PhD is a Senior Lecturer in Engineering Science and Mathematics. He worked as an engineer and manager in industry for eight years before returning to academia to research sustainability in the energy sector. His research interests are in modelling smart energy management systems, particularly at community scale.

Sheridan Tatsuno is a Co-Founder of OneReality.com and Principle at Dreamscape Global. He is a Silicon Valley strategist, business author and advisor supporting development across a range of smart technologies, including VR, particularly in support of eco-city initiatives.

Dr Alan-Miguel Valdez, PhD, MA, BSc has dedicated ten years to the study of experimental spaces in the English new town of Milton Keynes that have facilitated the development of new knowledges about sustainable innovation. Through this research he has developed an interest in the ways in which such knowledges coalesce, and travel and in the ways actors make sense of innovative technologies to develop their own narratives about the future of their city.

Acknowledgements

We would like to express our thanks to all those who generously contributed to peer reviewing the chapters of this book. While the editors provided some peer reviews, we are especially grateful to the following: Professor Witold Bartkiewicz, Analysis and Intelligent Systems Department, University of Łódź, Poland; Mr Nicholas Bowker, Independent Engineer, UK; Professor Rene Cabral-Torres, EGADE Tec de Monterrey, Mexico; Professor David Eaton, LBJ School of Public Affairs, University of Texas at Austin, USA; Dr Malgorzata (Margaret) Grzegorzczak of Nottingham Business School, UK and the University of Łódź, Poland; Dr Brendan Hill, Independent Academic Consultant, UK; Dr James Jarrett, Senior Research Scientist, IC² Institute, University of Texas at Austin, USA; Dr Bruce Kellison, Director of Bureau of Business Research, IC² Institute, University of Texas at Austin, USA; Professor Piotr Niedzielski, Faculty of Management and Economics Services, University of Szczecin, Poland; Professor Anna Pamuła, Chair of Computer Science Department, IT Governance and Service Management, University of Łódź, Poland; and Mr Sheridan Tatsuno, OneReality.com, USA and Sweden.

We are grateful to the International Organising Committee and the Local Organising Committee of the 15th International Conference on Technology Policy and Innovation (ICTPI), hosted by The Open University, UK, in June 2015. In particular, we are most grateful to Kevin Gowans and to Paula Sparling for their assistance with the organisation of the conference, and we acknowledge the kind assistance of the administrative staff of the School of Engineering and Innovation at The Open University in delivering a successful gathering. That conference provided the initial impetus for this book. Without the imagination and support of the ICTPI family this book would not exist.

We are grateful to our commissioning editor at ICE Publishing, Michael Fenton. His thoughtful suggestions and unflinching support are much appreciated. We are also most grateful to Angela Walters at The Open University, who kindly assisted with preparation of the final manuscript.

Finally, we would like to express our most sincere thanks to Dr Wendy Maples, who acted as project manager as the book was assembled. Her conscientiousness and attention to detail were key to ensuring that the book came together successfully.
