Contents	About the editor	ix
	About the contributors	xi
01	Introduction	1
	1.1. Introduction	1
	1.2. Overview	1
	1.3. Background	2
	1.4. The scope of this book	6
	1.5. Definitions of key words	7
	1.6. Conclusion	9
	Bibliography	9
02	Managing alteration and refurbishment projects	11
	2.1. Introduction	11
	2.2. Procurement matters	11
	2.3. Key health and safety duty holders in refurbishment projects	13
	2.4. Managing information and communication	18
	2.5. Information and communication life cycle	18
	2.6. Conclusion	20
	Bibliography	21
03	Technical issues on alteration and refurbishment projects	23
	3.1. Introduction	23
	3.2. Technical information	23
	3.3. Loadings and load paths	24
	3.4. Surveys	26
	3.5. Structural testing	30
	3.6. Case studies – using the project cycle approach to technical issues	31
	3.7. Discussion and proposed framework	38
	3.8. Conclusion	39
	Bibliography	40
04	Building adaptation principles	41
	4.1. Introduction	41
	4.2. Modern challenges and their significance in terms of legislation	41
	4.3. Adaptation procedure	50
	4.4. Adaptation techniques	54
	4.5. Conclusion	65
	Bibliography	65

05	Extension and expansion projects	67
	5.1. Introduction	67
	5.2. What do EEPs constitute?	67
	5.3. Why are extension and expansion projects normally undertaken?	69
	5.4. Client development motivations	69
	5.5. VAT on extension projects	72
	5.6. Linear/horizontal and vertical extensions	72
	5.7. What is operation analysis and control (OAC)?	73
	5.8. What specific hazards are associated with EEPs?	78
	5.9. Conclusion	80
	Bibliography	80
06	Loft conversions to domestic dwellings	81
	6.1. Introduction	81
	6.2. Impact of different types of loft conversion on safety and health	81
	6.3. Prevention	82
	6.4. Management	83
	6.5. Tools, equipment and personal protection equipment	84
	6.6. Commonly found hazards	85
	6.7. Conclusion	92
	Bibliography	92
07	Basement construction, extension and alteration projects	95
	7.1. Introduction	95
	7.2. Significant issues in basement refurbishment	95
	7.3. Case study of a basement alteration project	96
	7.4. Construction work methods	98
	7.5. Pre-construction health and safety information for a typical basement alteration	98
	7.6. Conclusion	107
	Bibliography	107
08	Innovation in alteration and refurbishment project delivery	109
	8.1. Introduction	109
	8.2. Background	109
	8.3. Refurbishment with BIM	110
	8.4. Data capture techniques	111
	8.5. Future directions	114
	8.6. Conclusion	116
	Bibliography	117

09	Case studies of health and safety management in refurbishment projects	121
	9.1. Introduction	121
	9.2. Case study 1 – Design risk assessment	121
	9.3. Case study 2 – Managing asbestos materials	127
	9.4. Case study 3 – Client commissions a small construction project with a hands-on approach	129
	9.5. Case study 4 – Mobile elevating work platform used in façade repairs	132
	9.6. Case study 5 – Collapse of office building kills four workers	134
	9.7. Conclusion	137
	Bibliography	138
10	Sustainable practices in the project life cycle	139
	10.1. Introduction	139
	10.2. Sustainability as a traditional state-of-the-art strategy	140
	10.3. The construction and real estate industry as a sustainability key factor	140
	10.4. Certified build sustainability	142
	10.5. Specialised certification tools for refurbishment projects	145
	10.6. Future tasks for sustainable health and safety management	148
	10.7. Conclusion	149
	Bibliography	150
	Index	151

About the editor

David Oloke is a chartered civil engineer and construction manager with over 30 years of international professional experience. Throughout this period, David has been working mostly as a consulting engineer, project manager, researcher and academic practitioner. He has also served as a planning supervisor, construction design and management coordinator, and principal designer and designer on several projects in the UK. To date, he has been responsible for projects worth a total of over £150 million. David has been a member of the ICE Health and Safety Expert Community for over 15 years, serving as the chair of the ICE Health and Safety Register Working Group between 2012 and 2017. He was also co-editor on the *ICE Manual of Health and Safety in Construction* published in 2010 and 2015. In addition, David is co-chair for the annual RefurBIM conference, which brings together industry and academia to discuss the challenges and opportunities of implementing building information modelling (BIM) in renovation and refurbishment.

About the contributors

Louis Gyoh, a chartered architect and BIM manager, has worked in the architecture, engineering and construction (AEC) sector for 20 years. He rejoined the higher education sector in 2010. Louis's research interests are design risk management and design for deconstruction in BIM-led projects. Louis has consulted extensively for the World Bank Group, German Corporation for International Cooperation (GIZ), Chevron and USAID. He is currently a principal lecturer at the School of Architecture and the Built Environment, Faculty of Science and Engineering, University of Wolverhampton, UK.

Anthony Hatfield has over 25 years' experience in the building surveying profession, and is currently a senior lecturer in building surveying at the University of Wolverhampton, UK. He has managed and worked on numerous projects, including new build residential and commercial units, brownfield regeneration schemes, and the conversion and adaptation of the existing built environment. He was at the vanguard of drone technology being introduced into the building surveying curriculum. Anthony is a chartered construction manager and obtained an MSc with distinction in conservation of the historic environment.

David Heesom is currently a reader in BIM at the University of Wolverhampton, UK. He has spent 20 years researching the application of advanced digital technologies for architectural design and construction, publishing his work in international journals and speaking at events around the world, including the USA, China and throughout Europe. David is co-chair for the annual RefurBIM conference, which brings together industry and academia to discuss the challenges and opportunities of implementing BIM in renovation and refurbishment. David has won numerous funded research awards, and works closely with companies around the UK to support them in implementing BIM and digital technologies to enhance their processes.

Ciaran McAleenan has worked in industry since 1978, and joined the faculty at Ulster University in 2009. His particular research interests led to the co-creation of the Civic Ecology and Life Infrastructure group (CELI). Projects under this group address the impacts of infrastructure designs that expose the world to or are failing to protect the world from future hazards (natural and/or technological), and which raise environmental concerns that need to be tackled in life infrastructure designs. Ciaran focuses on the societal challenges presented by the United Nations Sustainable Development Goals and how engineering education needs to evolve to address the challenges of the 21st century, in particular the climate emergency.

Philip McAleenan is an independent researcher and consultant at Expert Ease International, a company he co-founded in 1996 to address the health, safety and wellbeing requirements of organisations. Innovative work on the reintegration of occupational safety and health

into work practices and research into workplace cultural maturity has led Philip to develop new perspectives on leadership and ethics reasoning in the workplace. His current research is into the social and ethical impacts of the application of artificial intelligence systems on worker agency and safety.

Carmen Mielecke is a founder and CEO of Life Cycle Engineering Experts (LCEE), a consultancy company specialising in the sustainable built environment. At LCEE she deals with the sustainability of building materials, construction and the real estate industry. In particular she advises customers of the construction and real estate industry on national and international sustainability certification. Carmen is a LEED advanced professional, a BREEAM assessor and auditor, a DGNB (German Sustainable Building Council) senior auditor and a building biologist. In addition, she is lecturer for sustainable building and construction at Darmstadt Technical University, Germany. After studying architecture she worked as an architect, and then moved to Darmstadt Technical University where she gained her PhD in 2011.

Torsten Mielecke is a founder and CEO of Life Cycle Engineering Experts (LCEE), a consultancy company specialising in the sustainable built environment. At LCEE he deals with the sustainability of building materials, construction and the real estate industry. In particular he advises customers of the construction and real estate industry on national and international sustainability certification. In addition, he is lecturer for sustainable building and construction at Darmstadt Technical University, the University of Applied Sciences in Münster and the University of Applied Sciences in Wiesbaden, Germany. After studying mechanical and industrial engineering he moved to Darmstadt Technical University, where he finished his PhD in 2013.

Pat Perry MCIEH MIOSH qualified as an environmental health officer in 1978, and spent the early years of her career in local government enforcing environmental health regulations, particularly health and safety law. Pat set up her own environmental health consultancy, Perry Scott Nash Associates Ltd (PSN), in 1988. In 2013 the consultancy joined a global group on regulatory compliance and safety management. Pat developed an expertise in the Construction (Design and Management) Regulations 1995, advising clients on their legal duties and undertaking the roles of planning supervisor and subsequently CDM coordinator under the 2007 Regulations. Pat wrote her first book on the 1995 CDM Regulations for Thomas Telford and then wrote on the 2007 CDM Regulations for Butterworth Heinemann. Pat's most recent books have been published by ICE, and include a series of questions and answers, including those on CDM 2015, risk assessment and health and safety. Pat continues to advise clients on the CDM 2015 and general health and safety, and has wide experience of refurbishment projects, particularly in the retail and hospitality sectors.

Sebastian Pohl has been a member of the managing board and a partner at Life Cycle Engineering Experts (LCEE), a consultancy company specialising in the sustainable built environment, since 2015. At LCEE he deals with the sustainability of building materials, construction and real estate industry. In particular he advises customers of the construction and real estate industry on national and international sustainability certification. In addition, he is lecturer for sustainable building and construction at Darmstadt Technical University and the University of Applied Sciences in Münster, Germany. After studying business and civil engineering, in 2010 he began working for a major management consultancy. He then moved to Darmstadt Technical University, where he finished his PhD in 2014.

Robert Weatherup lectures in construction economics with specialisms in whole-life value engineering and disaster response and recovery. He is the co-founder of the research group CELI (Civic Ecology and Life Infrastructure), which investigates the global societal challenges of health, food security, ecosystem biodiversity and smart green integrated communities. His research interests involve thinking differently about how we design, construct and use our built environment, specifically investigating engineering nature-based solutions to enhance biodiversity and the economics of procuring and managing biodiversity ecosystem services.
